## Description

The Gigalight SFP+ ZR TDM Transceiver is a “Limiting module”, designed for CPRI, 10GBASE-ZR, SDH/SONET, OTN and 10G Fiber Channel applications, link length up to 80km on G.652D SMF.

They are compliant with SFF-8431 Rev 4.1, SFF-8432 and SFF-8472 Rev 10.3.

The transmitter section incorporates a cooled EML laser, and the receiver section consists of a APD photodiode integrated with TIA. It utilizes internal clock and data recovery (CDR) units on transmitter and the receiver chains for SONET/SDH jitter compliance.

Digital diagnostics functions are available via a 2-wire serial interface, as specified in SFF-8472, which allows real-time access to device operating parameters such as case temperature, laser bias current, transmitted optical power, received optical power and module supply voltage.
